

VOSS

System partner
for hydraulic technology

www.voss-fluid.net

CONNECTION. RELIABILITY. THINKING AHEAD.

VOSS Fluid is your go-to partner for connection technology in fluid systems. From tailor-made individual components right up to ready-to-install hydraulic lines: our products satisfy the highest of requirements. Inspired by our passion for details, we're constantly improving upon our products. We're constantly developing our comprehensive expertise in the areas of consulting, engineering and logistics. This allows us to distance ourselves from the competition in a sustainable manner.

VOSS Fluid is present on an international level: alongside our headquarters in Germany, we have sites in France, Poland, Italy, Spain and China. Our network is supplemented by sales partners all over the world. This means that we're always close to our customers.

VOSS Automotive and nine other foreign subsidiaries belong to VOSS Holding. Together, we make up the VOSS family which is based in the North Rhine-Westphalian town of Wipperfurth.

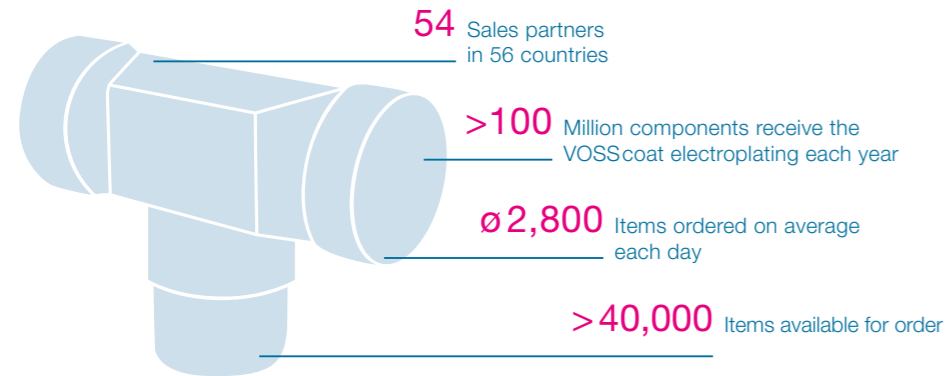

CONNECTION.

More than 80 years of expertise in fluid technology and our love for detail is what makes the difference. We're the number 1 for a wide range of applications. We satisfy the highest standards for our customers from the fields of stationary and mobile hydraulics, providing them with connection systems and components of the highest quality. Our products set the standard in the industry. That's how we create a long-term successful relationship to our customers and partners.

VOSS in numbers

Distinctive right from the start

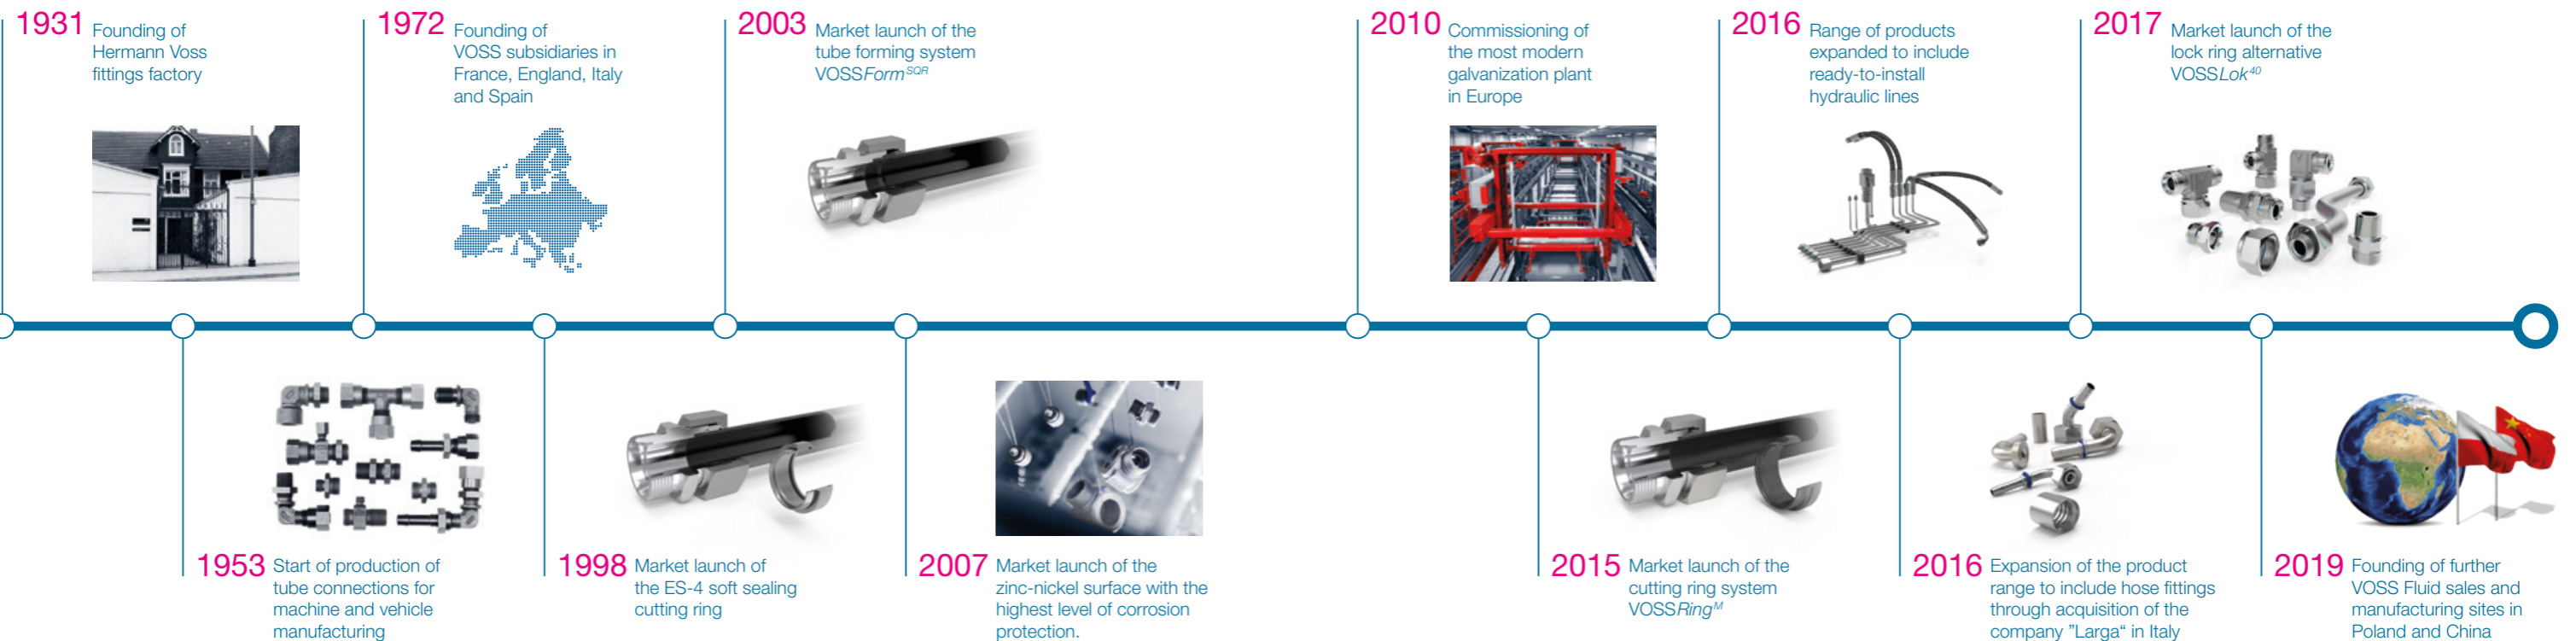

Our roots go back to the 1930s. In 1931, our founder and namesake Hermann Voss began manufacturing domestic plumbing fittings from brass. In 1953, Hermann Voss introduced a new product range: the young company began to specialize in the production of tube couplings for machine and airplane construction. The company's structure changed in 1999. The business areas of Fluid and Automotive became individual companies, as the markets were very distinct from one another. From the 1950s right up to the present day, we have been making a significant contribution to shaping the development of fluid technology. We have also continuously further developed quality standards in terms of efficiency and leak proofing.

Firmly connected

Functional reliability and leak tightness have always been the top priorities for VOSS Fluid. We give our full dedication to each and every one of our products – from the cutting ring through to the non-return valve right up to the flange connection. Alongside a wide range of standardized parts, pre-assembly devices, ready-to-install hydraulic lines and first-class hose fittings, we also offer our customers individual, tailor-made solutions. We never compromise on quality: regardless of whether it's an order for 1 or 100,000 parts. Instead we guarantee our customers that each component they buy is a premium-quality product.

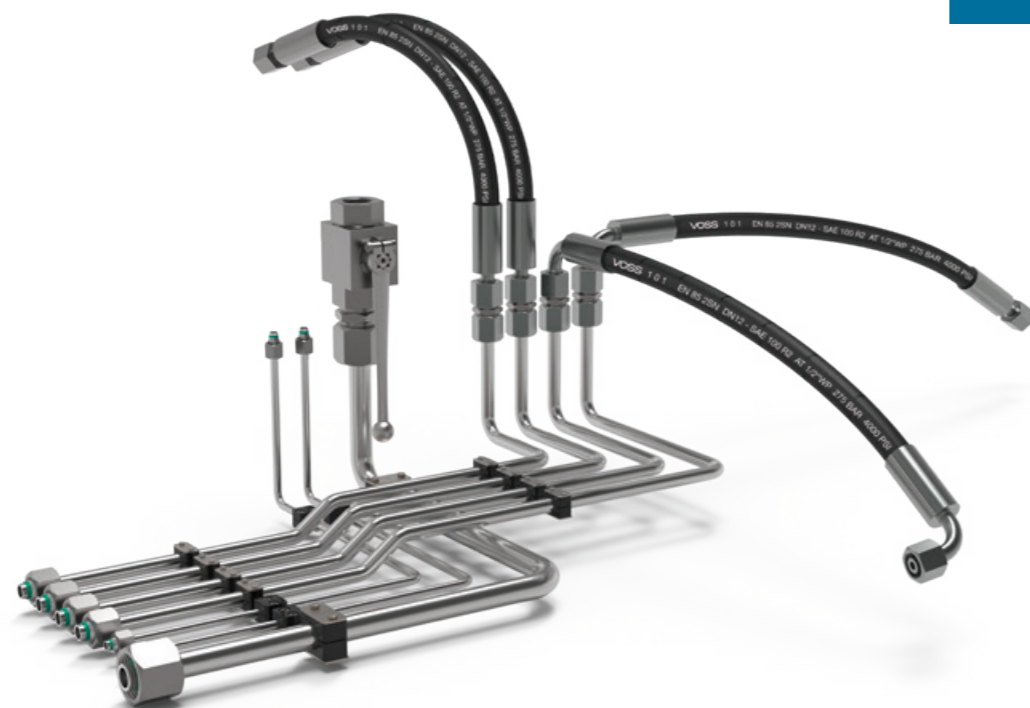

Fluid motion

We simply can't stay still. That's why we have transformed ourselves from a simple component manufacturer into a system partner for fluid technology over the years. VOSS products are used in a wide variety of fields, that is practically everywhere where hydraulics are used. VOSS Fluid provides all the appropriate hydraulic systems and components to keep diggers, compactors, agricultural vehicles and conveyors working properly from a single source.

RELIABILITY.

It's not just our hydraulic connecting components and systems that are of the highest quality. Our services are first-class as well. VOSS Fluid offers its customers the total package, from project advice to engineering right up to individual logistics services. Our comprehensive service portfolio is structured in a targeted manner to discover areas where users can save money and make use of optimization processes.

Get the best advice

Every project comes with its own challenges. That's why analysis and consulting are part of our service. The results that we gather enable us to develop an ideal line arrangement and help us to select the right products for your vehicles and machines. We always keep an eye on the total cost of ownership so that we can offer you the most economically viable solution.

Clever C part management

Your requirements are the standard to which we work. If you wish, we can analyze your entire supply chain to see if it has optimization potential. VOSS Fluid has developed smart logistics solution to enable us to provide efficient C part management. The advantages: reduced process and storage costs, lower throughput times and a higher degree of availability.

Engineering made in Wipperfürth

"Making good things even better" – this is the motto to which our experienced employees work, ensuring that nothing is left to chance. Our job is to provide maximum functionality and the highest level of safety. That's why we continue to re-test even our most tried-and-tested products. We don't follow trends – we're the ones who set them. One of our strengths is developing individual special products in accordance with customer specifications. All the individual components used are perfected tuned, to work with one another and it goes without saying that all of them have the VOSS quality that you're used to.

Practice makes perfect

Our efficient training scheme means that trained employees can detect any potential for error early on. To this end, VOSS Fluid carries out regular training sessions and audits in the assembly department. In them, the users learn the correct way to install the products, both in theory and in practice. During the audit, we assess all the relevant processes, materials and tools. Two schemes that have the same goals: less errors, faster results and lower costs.

VOSScoat – the extra layer of quality

Reliable corrosion protection is critically important for the functionality and long life of our components. That's why VOSScoat comes as standard on our products. The high-quality zinc-nickel alloy is developed and perfected in our own electroplating competence center in Wipperfürth, it offers the maximum level of process safety for our customers.

THINKING AHEAD.

Questioning existing standards. Not resting on our laurels but looking towards the future. Thinking about tomorrow's challenges, today. This is the typical VOSS way of thinking. We take responsibility both for the protection of the environment and the health and well-being of our staff.

We nurture and support our employees with regular training sessions and a well-founded training scheme. It goes without saying that we deal with people on a fair basis and on equal footing. We're thinking about tomorrow even as early as when our products are in the development stage. That's why we don't just invest in advanced technology – we also invest in the knowledge of our employees. This is how we create innovative solutions such as our VOSScoat.

Working sustainably

Sustainability is the core of our being. Respecting nature and protecting it in the best possible way are company goals to which we assign a high degree of importance. For this reason, we invest sustainably in resource-saving technologies and then train our employees in them. To do this, VOSS Fluid doesn't just remain a stickler to the legal requirements; rather we formulate our own compliance guidelines with the highest of standards, all based on the philosophy of our founders.

Our employees make the difference.

What is the basis of our success? Our employees of course! We want to achieve more as a team. That's why we place a lot of value on collegiality, loyalty and appreciation. We support our employees in a targeted manner with training courses or internal workshops and in doing so, offer each of them job prospects and personal career opportunities.

We pay a lot of attention to the needs of our staff and have an employee-friendly environment which helps to build solidarity. These are the conditions that we pass on to our management staff as well. From health-promoting measures to sabbaticals – we are open to any motivating support of the well-being of our colleagues. It goes without saying that occupational health and safety is a huge priority for us.

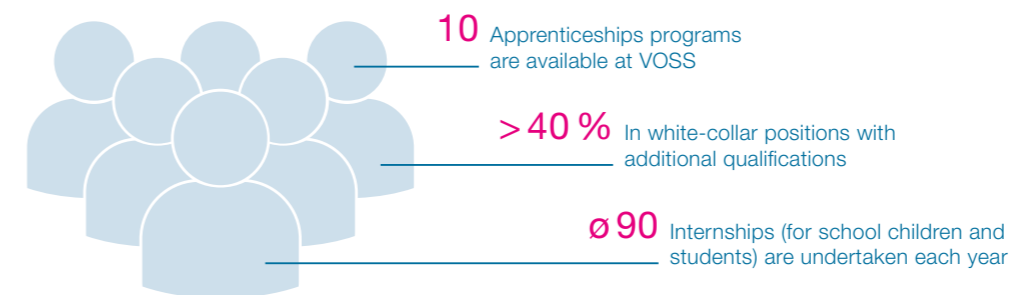

For these and for other reasons, VOSS really is a great place to work. Our colleagues always have strength and motivation through a healthy work-life balance and we have flexible working time models which we use to promote this.

Apprenticeships with prospects

Business success depends upon qualified specialist workers. VOSS trains its employees itself; this integrates them into our company's culture early on and promotes their talents in the best possible way. This creates the best opportunities to continue employing students and work students. We've been presented with several awards as an employer and for our apprenticeship – and not without reason! We are particularly proud of these accomplishments.

VOSS in numbers

Connection. Reliability. Thinking ahead.

Our secret recipe for the perfect customer relationship: passion, experience and an eye for detail. Our comprehensive knowledge is included in every element of our product range. This creates tailor-made system solutions and excellent services that you can rely upon. At VOSS, we're always one step ahead. This means that we can provide you with the best quality and individual solutions for the requirements of your industry in the future as well. We take our responsibility seriously – in everything that we do.

As such, we contribute to sustainable environmental protection and help our employees to develop their personal skills and strengths. This is the only way in which we can continuously improve our products and services for you. What can we do for you?
