

VOSS

Conspicuously superior – VOSS*Point*^{DC} Measuring Couplings

www.voss-fluid.net

Functionality and design for the highest demands

Coupling and measuring under high pressure

Pressure testing in hydraulic systems is extremely important for smooth, reliable plant operation. Measuring couplings are now standard in hydraulic systems and are widely used. They facilitate nearly completely leak-proof coupling and uncoupling of measuring and test equipment during plant operation or the connection of appliances for filling or venting.

VOSS measuring couplings redefine security and handling. To accomplish this, we revamped the best design concept on the market, providing it with the superior VOSS coat zinc-nickel coating. The ingenious twist: To improve handling in practice, the end cap is connected to the coupler body by a colored plastic element.

Innovative and high-quality – our product design

A revolutionary design with impressive details. Corroded and torn chains are passé. Our integrated plastic element imparts measuring couplings a high-quality look, ensures a permanently secure attachment, and prevents the end cap from loosening due to vibrations.

- Color differentiation between different hydraulic circuits
- Clearly visible diagnosis access
- Individual color design possible
- Integrated vibration protection

Security is our design principle

All leakage paths secured with additional soft seal

To achieve 100% secure sealing, we use a combination of metallic and elastomer seals on the primary seal. To increase the leakage security even further and minimize wear, the seal point is designed in such a way that any unnecessary flexing of the O-ring seal is prevented when the coupling is opened and closed.

In the secondary seal, an additional stabilization of the O-ring increases the long-term sealing effect of the VOSS measuring couplings by up to ten times. The compact construction of the VOSS *Point^{DC}* couplings is accomplished by using a one-piece housing. This prevents the formation of additional leakage paths.

Measuring couplings in the closed position

Measuring couplings in the opened position

High leakage protection

- Elastomer seal for 100% secure sealing
- Up to ten times greater long-term sealing of the secondary seal through additional support ring
- One-piece housing design prevents the formation of unnecessary leakage paths
- Structural minimization of O-ring wear

Convincing point by point

The VOSS*Point*^{DC} measuring coupling in detail:

Tested for reliable, superior performance

Nothing is left to coincidence

Starting right with development, we put our new measuring couplings through comprehensive trials to achieve an especially application-oriented product design. VOSS*Point*^{DC} has been put to the test many times to ensure its superior durability, functionality, and simple handling. Our most important test criteria were:

- Static leak tightness for 160 hours
- Burst pressure greater than 4 times the nominal pressure
- Impulse test to determine the service life (more than 2 million impulses)
- Coupling test under pressure
- Flow volume in both directions at 250 bar
- Resistance to environmental influences (UV resistance, salt spray test, tensile test)
- IPX9K = Protection against water under high pressure and steam cleaning, specifically for road vehicles

Every measuring coupling is checked for functional reliability and leak-tightness, even during series production.

Colorful variety

Clear orientation thanks to individual color scheme

In delivery standard, the plastic cylinder is dyed blue, which makes the connection facilities clearly recognizable for the user in complex hydraulics systems.

- Additional basic colors for visual differentiation of multiple hydraulic circuits
- Individual coloration to match your own branding and product design also possible on request

The VOSS product name for measuring couplings and measuring equipment hoses

This brochure contains a alphanumeric product designation, which is modeled strongly on ISO 8434-1. This makes the designation speak for itself and the product is easy to identify.

Due to the English structure this can be understood internationally. Also through the product designation customerspecific solutions can be generated from variations of existing

Examples:

DC/24-TC-L8-TPC1-L8-SCV

Threaded studs for measuring couplings

Sealing with PEFLEX profile seal ring

Standard material of the profile seal rings is NBR

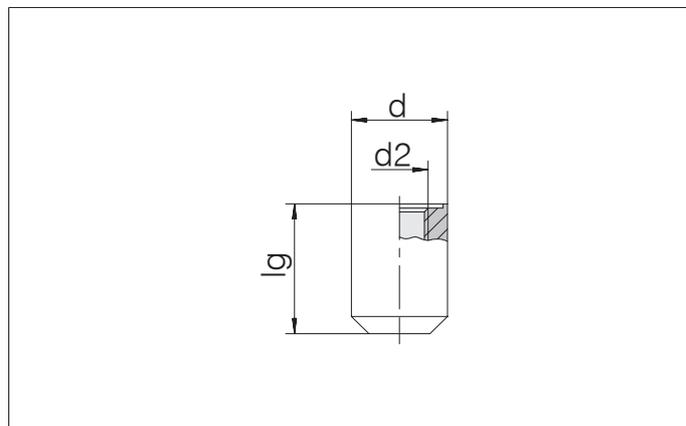

Threaded studs, Form CS

d2	Pressure	l2	SW1	i	Form	Order-No.	Designation

Technical notes	P.27
-----------------	------

Seal types and threaded bores	P.28
-------------------------------	------

Technical notes

Specifications

- Design as per DIN ISO 15171-2
- Approved for up to 630 bar maximum operating pressure
- High number of variants
- With integrated vibration protection
- Primary and secondary sealing
- Secondary sealing with additional Teflon support ring

Main body material

- steel

Cap fastening material

- TPE-E

Soft seal components

- NBR (optional FKM)

Media and temperature resistance

- Commercially available mineral oil based hydraulic oil up to +100 °C

Corrosion protection

- Zinc-Nickel based corrosion protection according to VOSS specifications
- Corrosion resistance > 1000 hours, test as per DIN 50021-SS

Coupling body color

- metallic, gray-matte

Mounting lug cap designs color

- blue (standard color) – other colors on request

IP-protection type testing IPX9K

- Acc. to ISO 20653:2013-02. Protection class IPX9K

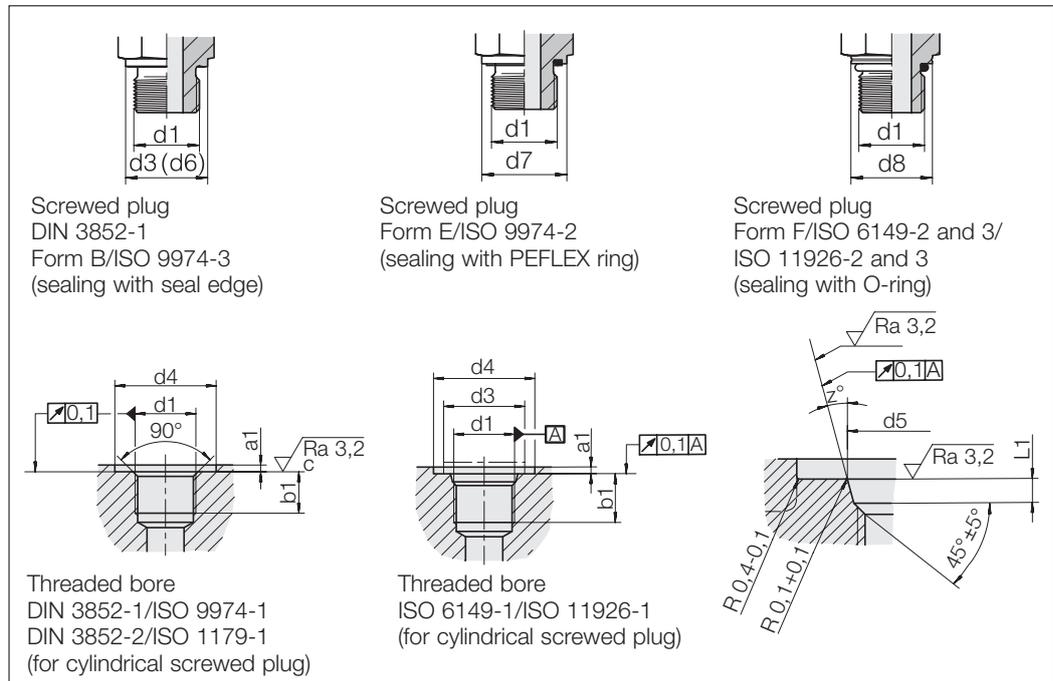

Seal types and threaded bores

for VOSS Messtechnik

Male thread:
Metric fine thread, cylindrical

PEFLEX and O-ring seals
made standard of NBR
-35 °C to +200 °C

made of FPM/FKM
-25 °C to +200 °C
